Retail Sales & Growth Analysis

A comprehensive analysis of retail sales data — identifying key trends, growth patterns, and actionable business insights across regions, categories, and time periods.

EXCEL · PYTHON · POWER BI

Made with GAMMA

Key Findings at a Glance

~45%

Electronics Revenue Share

Highest revenue-generating category

Q4

Peak Sales Period

October–December festive spike

2

Top Regions

West & North dominate sales

📈 Sales Growth

Steady upward trend with seasonal spikes during festive periods

🌍 Regional Gap

Urban regions significantly outperform rural regions

👤 Customer Value

Repeat customers generate higher average order value

Made with GAMMA

Project Objectives

01

Identify Sales Trends

Analyze monthly and quarterly sales performance over time

02

Top Products & Categories

Determine highest-performing products and categories

03

Regional Distribution

Analyze sales distribution across North, South, East, West

04

Revenue & Profit Margins

Measure revenue growth and profitability by segment

05

Interactive Dashboard

Build a Power BI dashboard for real-time decision-making

Made with GAMMA

Data Source & Tools

Dataset Fields

Order ID, Order Date, Product Category & Sub-category, Sales Amount, Profit, Quantity Sold, Region (North, South, East, West), Customer Segment

Tools Used

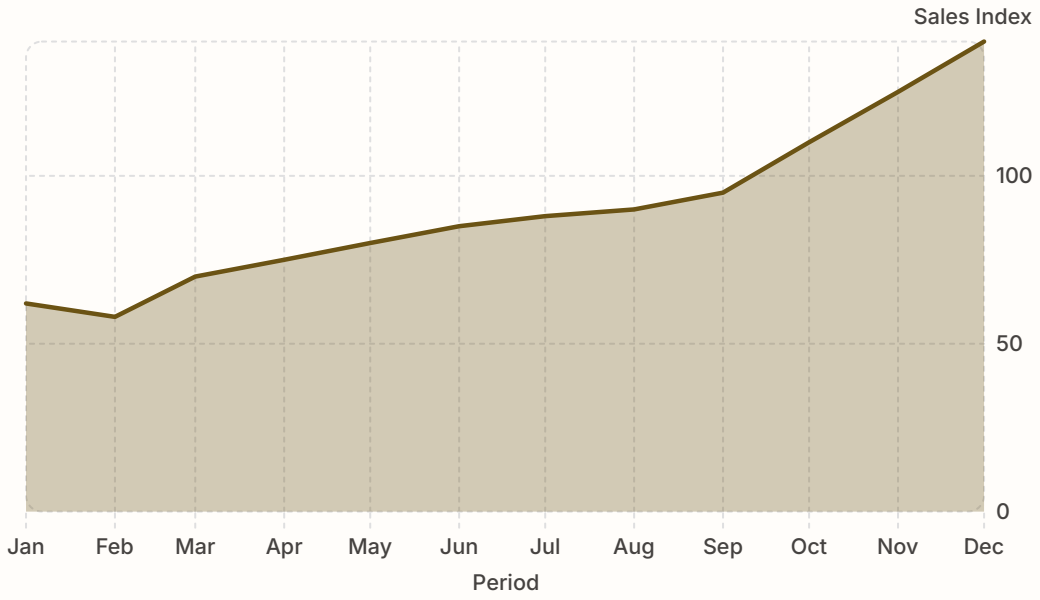
Dashboard Dev

A structured four-phase workflow was followed — from raw data cleaning through feature engineering and EDA to final Power BI dashboard development — ensuring reliable, actionable insights.

Made with GAMMA

Sales Trend Over Time



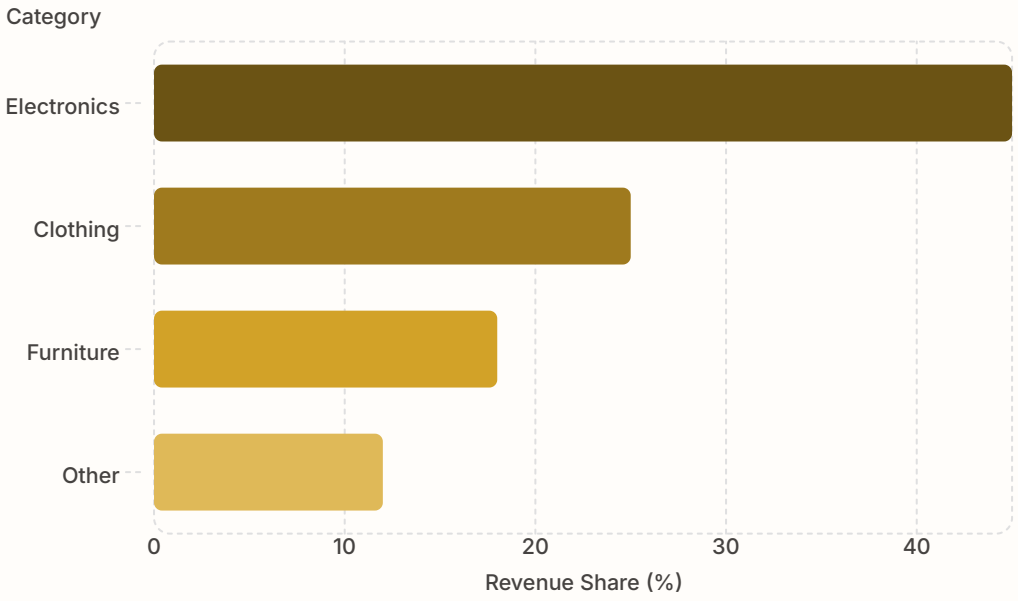
Key Insights

- Sales show **consistent growth** over time
- Significant spikes during **festive seasons (Oct–Dec)**
- Slight dips observed in **early-year months (Jan–Feb)**

Q4 (October–December) is the peak sales period, driven by festive-season demand.

Made with GAMMA

Category & Regional Performance



Category Insights

- **Electronics** leads with ~45% revenue share
- Clothing and Furniture follow
- Low-performing categories need promotional strategies

Regional Insights

- **West & North** regions dominate sales
- East region shows the lowest performance
- Opportunity for expansion in underperforming regions

Made with GAMMA

Profit & Customer Behavior

High Sales ≠ High Profit

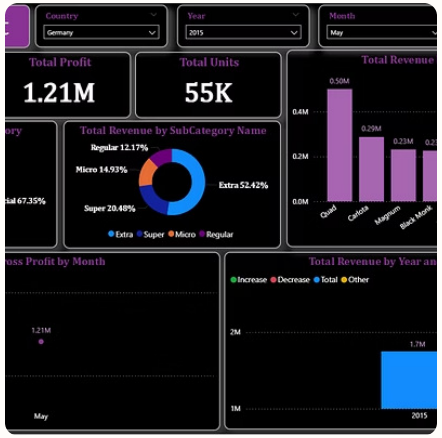
Some categories generate high revenue but carry low margins — profit growth is strongest in premium product segments

Repeat Customers Win

Repeat customers contribute more revenue; bulk purchases increase profitability while discount-driven purchases reduce margins

Made with GAMMA

Interactive Power BI Dashboard



KPIs Displayed

Total Sales · Total Profit · Growth % · Avg Order Value

Conclusion & Recommendations

Retail sales analysis reveals strong growth trends with clear seasonal patterns. While revenue is increasing, profitability varies — strategic optimization is needed.

Seasonal Strategy

Increase inventory before peak seasons; run targeted festive campaigns

Category Optimization

Focus on high-margin products; improve low-performing categories

Regional Expansion

Invest in underperforming regions; customize marketing region-wise

Customer Retention

Offer loyalty programs; target repeat customers

Profit Improvement

Optimize pricing strategies; reduce unnecessary discounts
